QUARTERLY BUSINESS REVIEW

GGMI (LATAM) — Paid Media

Q3 FY2026 Business Review · June 2026 Performance

Bing Ads · Meta · Azerion · Quantcast

Reporting period: June 1–30, 2026 | Currency: USD | Prepared by Berelvant · 07.16.2026

SUMMARY · BLENDED VIEW (ORGANIC + PAID)

Paid-driven applications grew through Q3 while the blended base softened.

- June submitted applications came in at 684, down 7% MoM; the H1 peak was February (1,036).
- New approved rose 7% to 209 and the approval rate recovered to 31%, the best since February.
- New funded dipped 11% to 32 and the fund rate to 15%. The application-to-funding step is the funnel constraint.
- New traded closed at 29; trading volume held at $1.1B.
- Working media reached $120,393 in June (+53% MoM), the biggest month of 2026, while paid-driven applications grew every month of Q3.

GGMI — blended	Jan	Feb	Mar	Apr	May	Jun	MoM
Working Media Spend	$1,717	$20,578	$42,424	$46,294	$78,790	$120,393	+53%
Submitted Applications	1,029	1,036	900	751	732	684	-7%
Approved Clients	288	337	261	202	195	209	+7%
Approval Rate	28%	33%	29%	27%	27%	31%	+4pp
New Funded Clients	66	59	63	38	36	32	-11%
Fund Rate	23%	18%	24%	19%	18%	15%	-3pp
Cost per Funded Client	$26	$349	$673	$1,218	$2,189	$3,762	+72%
New Traded Clients	56	52	57	35	36	29	-19%
Cost per Traded Client	$31	$396	$744	$1,323	$2,189	$4,151	+90%
Trading Volume	$5.1B	$2.5B	$2.3B	$2.1B	$1.1B	$1.1B	flat

Funnel metrics are blended organic + paid. Working media per the budget tracker. MoM = June vs May. January cost figures reflect a near-zero media base ($1,717); the scaled-media baseline starts in March.

Q3 FY2026 IN REVIEW · SPEND

Spend rose from $46K in April to $120K in June.

Channel	Apr	May	Jun	Q3
Bing Ads	$15,289	$15,972	$25,659	$56,920
Meta	$5,224	$6,626	$25,924	$37,774
Quantcast	$15,005	$26,890	$33,784	$75,678
Azerion	$10,777	$29,302	$35,026	$75,105
Total	**$46,294**	**$78,790**	**$120,393**	**$245,477**

Month-over-month growth: +70% into May, +53% into June. June ran at 2.6x the April level.

READ

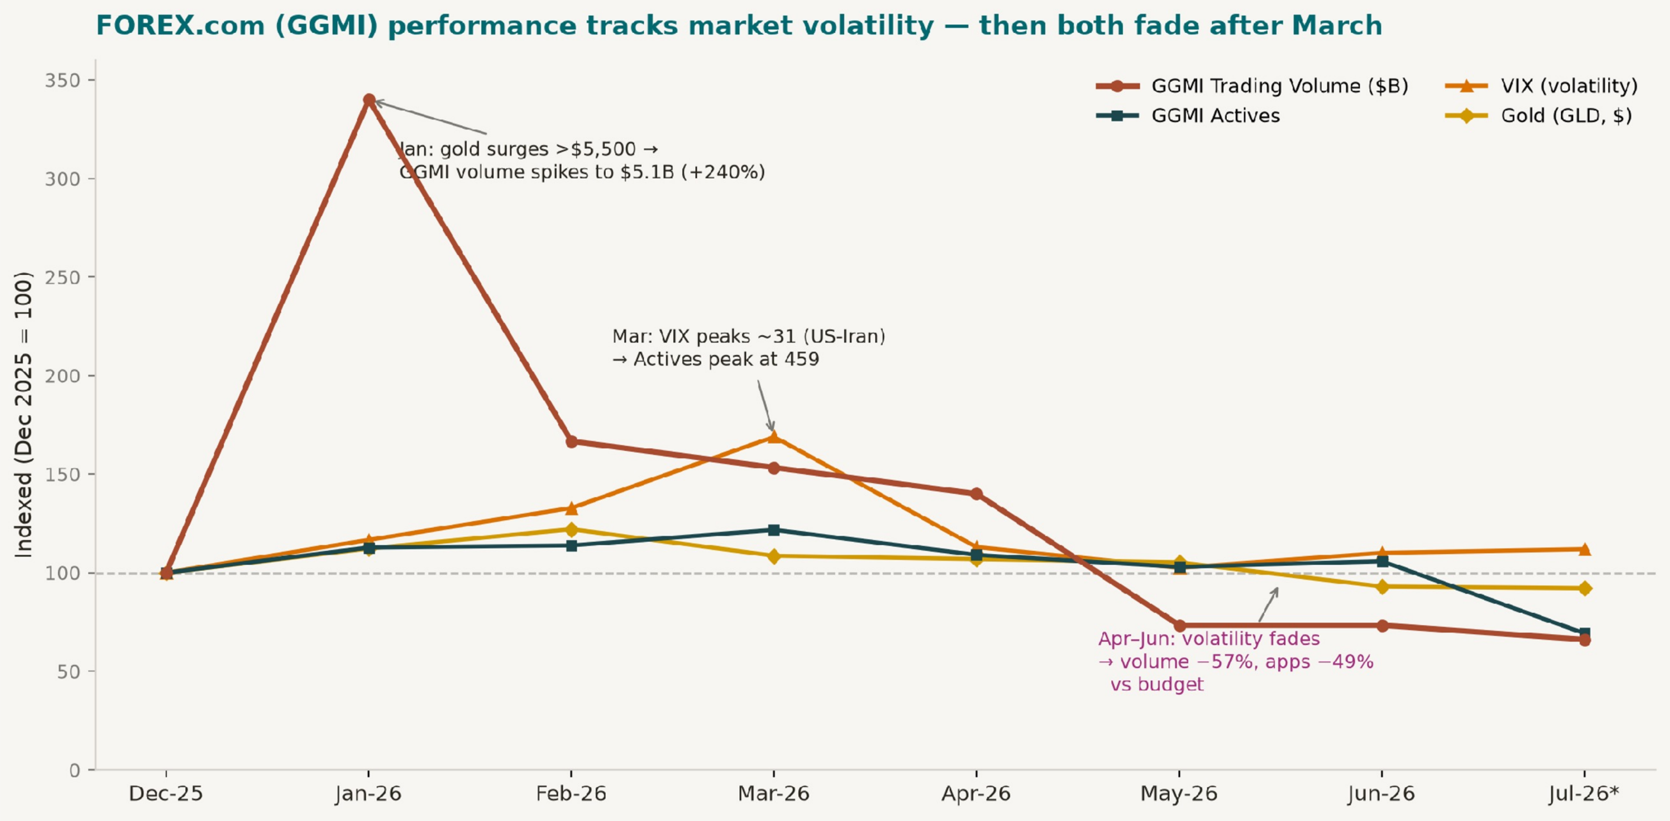
Q3 closed at $245,477 in working media, approximately 24% of the FY2026 budget.

The mix rebalanced as the program scaled. April leaned on search and display; June is a balanced four-channel program with no channel above 29% of spend.

Every channel grew while holding or improving its efficiency where we can measure it, which is what earns the next stage of scale.

FOREX.com (GGMI) performance tracks market volatility

Dec 2025 – Jul 2026 · Budget vs Actual (Reforecast GGMI) · all series indexed to Dec 2025 = 100



0.91
r =
Live Apps vs Gold (GLD)
very strong

0.94
r =
Actives vs VIX (Dec–Jun)
very strong

0.62
r =
Trading Volume vs Gold
moderate–strong

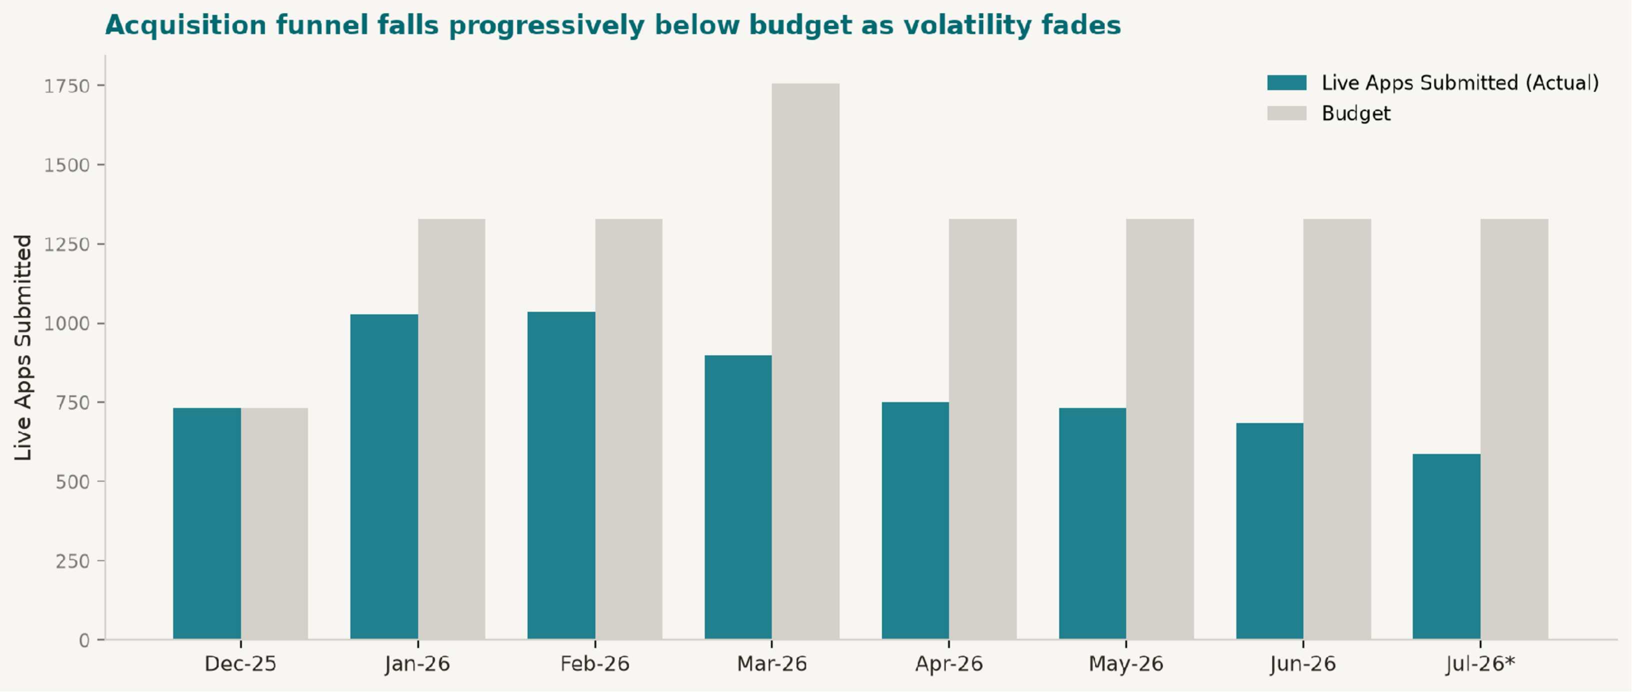
0.67
r =
New Funded vs VIX
moderate–strong

Key insight: GGMI's acquisition funnel and active base are highly correlated with market volatility — gold drives applications (r=0.91), VIX drives actives (r=0.94). The Apr–Jun miss vs budget is largely the volatility tailwind reversing more than media performance. January's $5.1B volume spike was gold-driven; as gold and VIX faded, volume fell 78% from the January peak to $1.1B.

Source: *GGMI Budget vs Actual (Reforecast) dashboard* · CBOE VIX, SPDR Gold Shares (GLD) OHLC market data

Acquisition funnel falls below budget as volatility fades

Live Apps Submitted: Actual vs Budget



The real story: Downstream outcomes (traded, actives, volume) beat budget through March on the volatility wave (Jan volume +176% vs budget). Applications ran about 22% under budget even then, and the gap widened as gold/VIX normalized — July apps (forecast) at 586 vs 1,328 budget (−56%). Re-engage aggressive acquisition only when VIX pushes back above ~20–25.

What it means for the strategy

Volatility = the acquisition dial.

Time spend to VIX > 20–25 spikes; in calm periods (VIX ~17 now) shift budget to activation & retention.

Gold is the #1 acquisition driver.

Apps track gold at r=0.91. Lead Mexico creative with gold dip-buying (banks still see $4,900–6,000 by year-end).

July stays soft.

Low-vol regime → funnel remains under budget unless Fed/CPI/Sept hike reignites VIX.

Media plan: intent + reactivation.

Bing Ads search on gold/CFD keywords to capture gold-intent (r=0.91); programmatic display to reactivate Jan–Mar sign-ups during VIX>20 bursts.

Q3 FY2026 IN REVIEW · APPLICATIONS

103 blended applications in June at $1,169 per application.

Channel	Apr	May	Jun	Q3
Bing Ads	—	33	50	83
Azerion	19	37	42	98
Quantcast	0	1	11	12
Meta	1	0	Held	1
Blended applications	20	71	103	194
Blended cost / application	**$2,315**	**$1,110**	**$1,169**	**$1,265**

Search tracking went live in May; display lines count submitted applications, the reach line counts view-through, and paid-social conversions are under validation.

READ

June delivered 5x the application volume of April on 2.6x the spend.

Blended cost per application fell from $2,315 in April to $1,169 in June and held near that level through a 53% spend increase, so the growth was bought at improving efficiency.

Search and programmatic carried the measured volume: 181 submitted applications at a cost per submitted application near $650, held through the June scale-up. Paid social contributed reach and site traffic while its conversion validation completes.

Q3 FY2026 IN REVIEW · BLENDED OUTCOMES VS PLAN

The gap to plan sits in the non-paid base.

Metric (organic + paid)	Q3 Actual	Q3 Budget	vs Plan
Live Apps Submitted	2,167	3,984	-46%
New Approved	606	957	-37%
New Funded	106	240	-56%
New Traded	100	180	-44%
Actives (monthly avg)	399	485	-18%
Trading Volume	$4.3B	$6.7B	-36%

Source: Budget vs Actual dashboard (non-cohort reforecast), GGMI, organic and paid blended. July excluded (full-month forecast).

READ

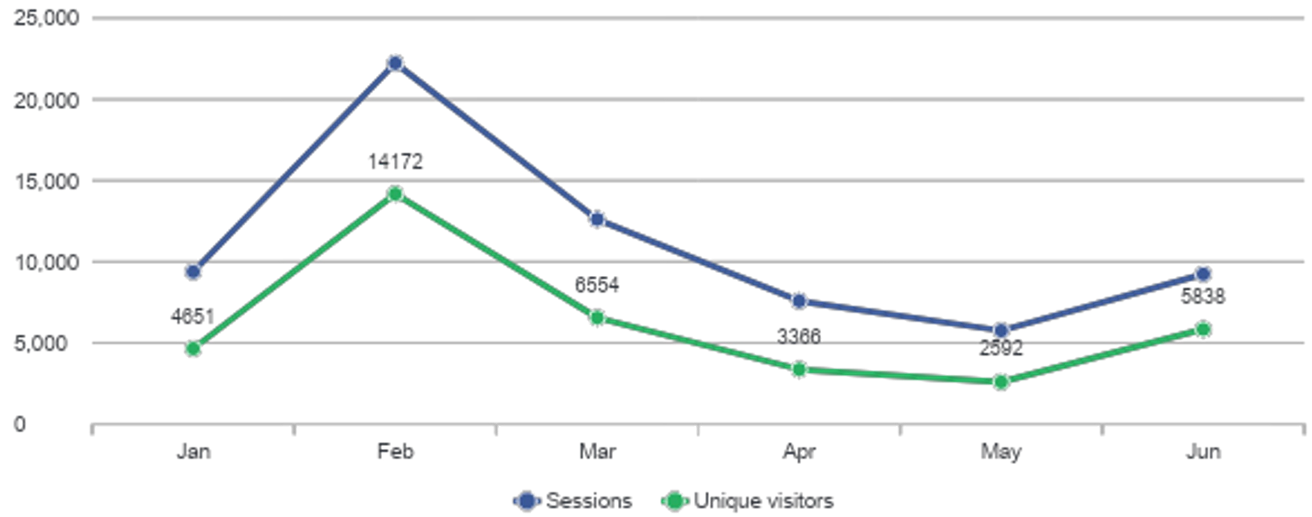
Blended submissions ran about 45% under plan and declined through the half-year (1,029 in January to 684 in June) while paid-driven applications grew every month of Q3. The shortfall sits in the non-paid base, where two forces overlap: the volatility tailwind that carried the early-year baseline reversed (previous slides), and the site's organic capture declined (next two slides).

The funded stage shows the second constraint: -56% to plan, the application-to-funded step the onboarding roadmap is built to fix.

Trading volume tracked the softer funnel at $4.3B against a $6.7B plan.

SITE TRAFFIC · SIX-MONTH VIEW (GA4, MEXICO)

June sessions rose 61% on the media scale-up. Organic sat at its low.



THE HONEST READ

February was one paid flight, not organic growth; it ended in early March and is not a baseline. The March-May slide is organic search decline, confirmed in Search Console. June's rebound was bought: of the +3,485 sessions vs May, paid search added +2,601, paid social +537, display +274. Organic added +94.

WHAT IT MEANS

Media is doing its job. June proves it can move traffic on demand.

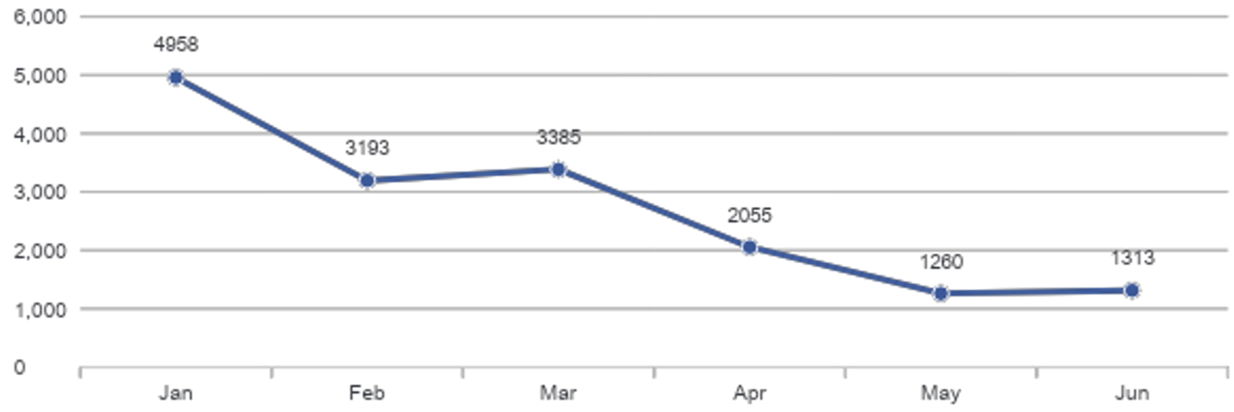
Unique visitors are up 26% January to June, the legitimate bright spot in the half-year.

The organic foundation needs its own workstream. Until it recovers, total site traffic will track media spend rather than compound on top of it.

ORGANIC SEARCH · THE STRUCTURAL ISSUE

Organic search fell 75% in six months. Media cannot buy it back.

Organic Search sessions · GA4, Mexico



Search Console (Mexico)	January	June	Change
Organic clicks	4,811	1,210	-75%
Demo account page (position)	12	23	slid
Trading academy page (position)	14	24	slid
Homepage, brand (position)	—	2.5	improved

WHAT IS DRIVING IT

Dated news and analysis content lost 87-99% of its clicks as it aged out with nothing replacing it, and mid-funnel commercial pages slid in rank while brand improved. The decline spans every country the Spanish site serves: a site-level content issue, confirmed independently in site analytics.

WHAT WE RECOMMEND

Open a dedicated SEO workstream: restore the news and analysis publishing cadence, refresh the decayed assets, and run a mid-funnel rank-recovery plan (demo, academy, platform pages), measured on organic clicks and positions. Until it lands, paid media works harder each month just to hold total traffic flat.

EXECUTIVE SUMMARY

$120K deployed in June. Search and display held their CPAs through the scale-up.

Channel	Spend	Impr	Clicks	Conv	CPA
Bing Ads	$25,659	466,582	21,480	50	$513
Meta	$25,924	19.78M	407,136	Held*	—
Azerion	$35,026	7.68M	9,910	42	$834
Quantcast	$33,784	41.96M	11,284	11 VT*	—
Total	**$120,393**	**69.9M**	**449,810**	**—**	**—**

* Paid-social conversions are held pending a placement audit. Programmatic view-through is directional only. Conversions use different events per channel and are never summed.

HEADLINES

June was the biggest GGMI media month of 2026: $120,393 across four channels, up 53% from May. Search produced 50 submitted applications at a $513 CPA, up from 33 in May, and Azerion held efficiency with 42 applications through a 20% budget increase.

WHAT THE DATA SAYS

Site traffic recovered with the spend: 9,236 Mexico sessions, up 61% from May, and 5,838 unique visitors, up 125%. The recovery is real but bought. Media drove the June gain while organic search sat at its low.

We are approximately 31% into the annual GGMI budget, so H2 has room to scale once the quality fixes land.

JUNE PRIORITY

Confirm the now-applied Mexico-only search targeting in July delivery, audit paid-social placements before reinstating its conversion reporting, and open the SEO workstream for the organic decline.

CONT' EXECUTIVE SUMMARY

Three findings shape the July plan.

WHAT IS STILL FORMING

The June traffic recovery was bought by media. Organic search has fallen 75% since January, confirmed independently in Search Console, for identifiable SEO reasons. No media budget fixes this, and it is why total site traffic feels flat while investment grows.

Meta scaled spend 291% and delivery stayed low-cost, but click quality collapsed as delivery shifted into low-cost in-app inventory. Its conversion reporting stays on hold until the placement audit completes.

Search geo, as reviewed together: $8,612 of June delivery served outside Mexico. Mexico-only targeting is now applied, and July delivery confirms the correction.

WHAT WE RECOMMEND

Verify the corrected Mexico-only search targeting in July delivery; roughly $8.6K per month is redirected into Mexico.

Run the placement-level audit and exclusions on paid social before scaling it further, and judge the channel on measured site sessions until validation completes.

Open a dedicated SEO workstream for the Spanish site. It is the structural fix for traffic that tracks media spend instead of compounding on top of it.

Apply the 49-site programmatic blocklist and set a campaign-level viewability floor.

berelvant

BING ADS · PERFORMANCE

50 submitted applications at $513, up from 33 at $484 in May.

SPEND	IMPRESSIONS	CLICKS	AVG CPC	SUBMITTED APPS	CPA
$25,659	466,582	21,480	$1.19	50	$513
+61% MoM	3 campaigns	CTR 4.60%	May: $0.53	May: 33	May: $484

Campaigns

Campaign	Spend	Clicks	Apps	CPA
AO Generic (policy test)	$13,508	11,020	27	$500
Brand + Generic	$8,154	7,559	9	$906
Platform Intercept	$3,996	2,901	14	$285

Geo delivery, as reviewed together: $8,612 of June delivery served outside Mexico, led by Spain, Venezuela, and the US. Mexico-only targeting (people in Mexico) is now in place, and July reports on the corrected setup.

HIGHLIGHTS

Conversions rose 52% (33 to 50) while spend rose 61%, so the CPA moved only $484 to $513 through the scale-up.

The account expanded from 1 campaign to 3. Platform Intercept is the efficiency leader at a $285 CPA.

CPC rose $0.53 to $1.19 with the shift into the new campaign themes.

BING ADS · READ & RECOMMENDATIONS

Concentrate every search dollar in Mexico.

WHAT THE DATA SHOWS

Search remains the most efficient measured converter in the account, and it held that efficiency while scaling 61%.

June was the last month on the old geo setup, with $8,612 delivered outside Mexico. With Mexico-only targeting now in place, that spend concentrates in-market, which should improve effective Mexico CPA immediately.

The new campaign themes raised CPC ($0.53 to $1.19). Platform Intercept converts at $285, so the mix has room to rebalance toward what works.

WHAT WE RECOMMEND

Mexico presence-only targeting is applied; the July report confirms 100% in-market delivery, with roughly $8.6K per month redirected into Mexico.

Rebalance budget toward the proven converters, led by Platform Intercept at $285, while the newer themes prove out.

Link the search account in GA4 so July reporting attributes paid search fully (detail on the measurement slide).

META · PERFORMANCE

19.8M impressions at a $1.31 CPM. Click quality is the June question.

SPEND	IMPRESSIONS	LINK CLICKS	CPM	LP VIEWS	CONVERSIONS
$25,924	19.78M	407,136	$1.31	249,972	Held
+291% MoM	100% Mexico	CTR 2.06%	May: $0.97	platform-reported	validation open

HIGHLIGHTS

Delivery scaled hard and stayed low-cost: 19.8M impressions at a $1.31 CPM, all in Mexico, with the first month off a pure traffic objective.

This account converted platform clicks into measured site visits at 15.7% in February. June ran at 0.19%. Same pixel, same site, same market. The February benchmark isolates inventory quality as the cause, and the placement audit converts that finding into exclusions.

WHY CONVERSIONS ARE HELD

The platform reports 86 conversions for June. 67 of them come from one retargeting campaign with only 126 landing-page views, which is not a credible application rate.

We are holding conversion reporting until the placement audit and pixel-event review complete. Delivery metrics (reach, clicks, CPM) are unaffected.

META · READ & RECOMMENDATIONS

Audit the placements before judging the channel.

WHAT THE DATA SHOWS

The traffic-objective delivery skewed toward low-cost in-app inventory, with 63% of spend serving users 55 and older; the placement exclusions and objective shift repoint it.

Platform-reported landing-page views exceed what any measurement system records on the site by an order of magnitude. The landing pages are confirmed tagged and tracking, so the February-vs-June capture comparison isolates inventory quality, not tracking, as the cause.

WHAT WE RECOMMEND

Run the placement-level audit and apply exclusions. This is the highest-value action on this channel for July.

Rebalance the 55+ age skew and complete the shift to a conversion objective.

Judge the channel on measured site sessions until conversion validation completes, then reinstate conversion reporting.

AZERION · PERFORMANCE

42 submitted applications at $834, from 37 at $792 in May.

SPEND	IMPRESSIONS	CLICKS	STEP 1	APPLICATIONS	VIEWABILITY
$35,026	7.68M	9,910	440	42	68.5%
+20% MoM	2.18M devices	+57% MoM	May: 225	$834 CPA	70% standard

Ad Sets (Applications)

Ad Set	Spend	Apps	CPA
Experience	$9,118	11	$829
Global Market	$4,124	10	$412
Trade (platform)	$4,221	7	$603
Language Broker	$4,994	7	$713
Conversion_Instruments	$4,211	4	$1,053
Spanish Platform	$4,229	3	$1,410
Conversion_Commodities	$4,128	0	—

HIGHLIGHTS

Applications rose 14% (37 to 42) on a 20% budget increase. The CPA moved $792 to $834, so efficiency roughly held at higher volume.

Application starts nearly doubled (225 to 440), keeping the upper funnel active.

Global Market converted at $412 and Experience carried the most volume. Conversion_Commodities spent $4,128 with no applications and is the first reallocation candidate.

AZERION · READ & RECOMMENDATIONS

Hold the pace. Confirm the delivery detail.

WHAT THE DATA SHOWS

Second consecutive month of scaled application volume, with efficiency holding within 6% while budget grew 20%.

Viewability is 68.5%, just under the 70% standard.

We have asked the vendor for country-level delivery confirmation plus funnel, site, format, and creative breakdowns (requested early July; awaiting reply). Mexico-only delivery certification is pending that response.

WHAT WE RECOMMEND

Hold the budget pace until the delivery breakdowns arrive.

Concentrate budget on the converting ad sets, led by Global Market ($412) and Experience, and reallocate away from Conversion_Commodities ($4,128, zero applications).

Push viewability over the 70% standard.

berelvant

QUANTCAST · PERFORMANCE & READ

A reach month at a $0.81 CPM. Viewability is the bill to manage.

SPEND	IMPRESSIONS	CPM	AVG CPC	VIEWABILITY	CONVERSIONS
$33,784	41.96M	$0.81	$2.99	51.3%	11
+26% MoM	+155% MoM	May: $1.63	May: $5.59	May: 67.1%	view-through

Month over Month

Metric	June	May	MoM
Spend	$33,784	$26,890	+26%
Impressions	41.96M	16.48M	+155%
CPM	$0.81	$1.63	-50%
Viewability	51.3%	67.1%	-15.8pp
Conversions	11 VT	1	+10

READ

We scaled reach on purpose: 42M impressions and 18.2M devices reached as CPM fell by half to $0.81.

Scaling reach at this CPM pulled in low-viewability inventory: 51% against the 70% standard. We delivered a 49-site blocklist covering 32% of June spend on this line and recommend a campaign-level viewability floor to hold quality as reach scales.

All 11 June conversions are view-through. Treat them as directional support, not proven response.

CROSS-CHANNEL PRIORITIES + NEXT STEPS

Concentrate in-market. Finish the measurement. Start the SEO workstream.

PRIORITY

Mexico-only search targeting is applied; July delivery confirms roughly $8.6K per month redirected into Mexico.

Run the paid-social placement audit and exclusions before reinstating its conversion reporting.

SCALING & OPPORTUNITY

Hold the budget mix pending the measurement fixes, then revisit allocation with clean July attribution.

Search efficiency held at $513 and earns the first incremental dollar once spend is concentrated in Mexico.

Open the SEO workstream for the Spanish site and apply the programmatic blocklist with a viewability floor.

MEASUREMENT TO CLOSE

Link the search account in GA4. 27% of June Mexico sessions are unattributed because of it, and July reporting will restate paid search larger once linked. We will flag the restatement.

Complete the placement audit and pixel-event review, then reinstate paid-social conversions.

Concentrate spend on measurable, in-market delivery while the quality fixes land.
